

Manufacturing Shop Floor Control System

Shop Floor Control Software for Small, Medium & Large scale Industrial Manufacturing, Packaging & Assembly units.

HUMAN/MACHINE INTERFACE

Easy-to-Use UI

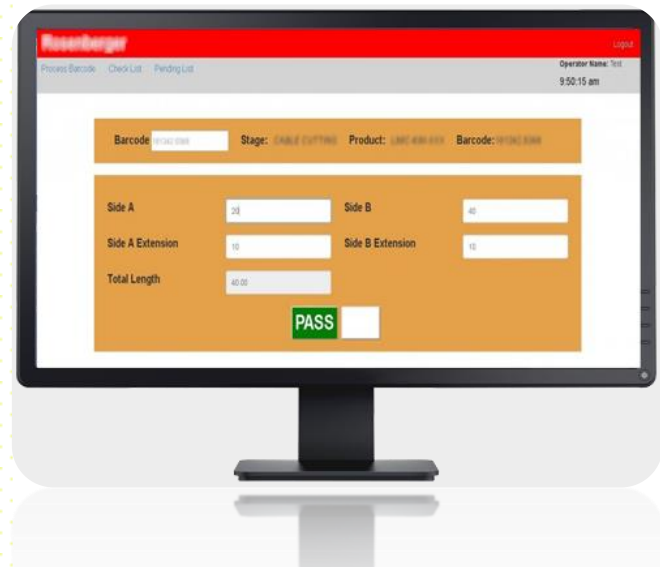

Real-time updates

Get the Work in Process data.

Access data and reports quickly and easily

Integrate with your Testing Equipment,

Weighing Scale Machines & other equipment.

View Item Queue, Generate Completed Checklist, Print labels, Record production line runtime. Get automatic alerts with notifications based on production line status. With real-time data always at your fingertips you can increase shop flow productivity and resolve inefficiencies on time.

Our System Facilitates the Order Planning, Barcoding, Production Line Assembly, Label Printing, WIP, Generate Reports & a lot more.

Work Order Detail

Print work orders, machine/production line details, enter Target, Finished Good (FG) lot.

Barcoding

Generate Barcodes for Items in productions, Enable bar-code based operator data updations.

Real-Time Production Monitoring

Monitor production activities in real time. Locate the production problems and take immediate preventive measures..

Operator Logins

Enables Personals or Operator working on Shop Floor to process update individual item checklist.

Supervisor & Quality Control logins

Quality Control & Testing - Record Quality Control data, Operator or Machine Interface.

Shift Mechanism

System allows for a complete Shift based data recording. Auto Shift detection/ Manual Shift data recording.

Production Reporting

Enter and track production for the currently running job or generate a list of all production based on dates, shifts, production line stations and operator stations .

Work in Progress (WIP)

Get the Work in progress data at any given instance of production, enabling better efficiency & also allow Project Manager to control output and take measures on productivity.

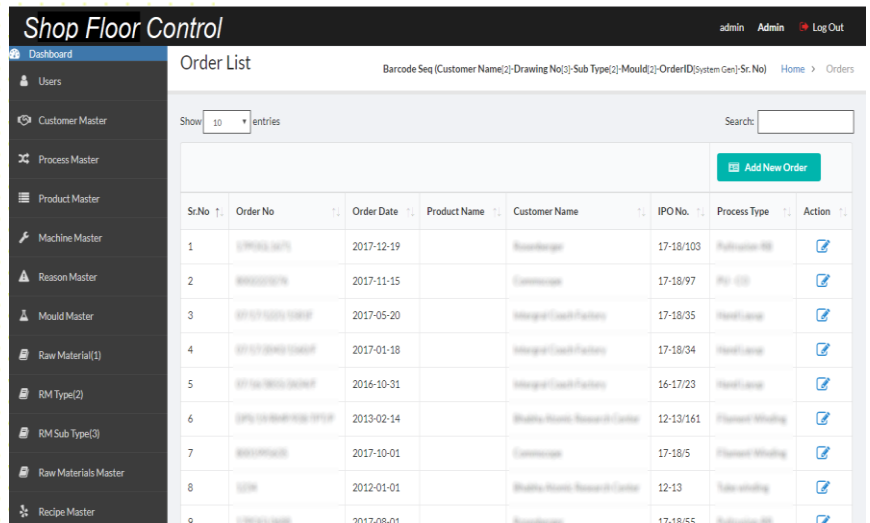

Label Printing

Easy & Quick printing labels right at the operator station. With one click easy configuration.

Operation Cost:Track operation labor costs by work order, or the order running on the production line.

Finished Goods Inventory: Connect with your ERP & Store and extract the finished Goods Inventory of the Stock finished.

Reports: Generate Variety of Reports from WIP, Daily Reports, Quality Check to performance reports.

The screenshot displays the 'Shop Floor Control' software interface. On the left is a dark sidebar menu with options: Dashboard, Users, Customer Master, Process Master, Product Master, Machine Master, Reason Master, Mould Master, Raw Material(1), RM Type(2), RM Sub Type(3), Raw Materials Master, and Recipe Master. The main area shows an 'Order List' table with columns: Sr.No, Order No, Order Date, Product Name, Customer Name, IPO No, Process Type, and Action. There are 9 rows of data. A search bar and 'Add New Order' button are visible above the table.

Sr.No	Order No	Order Date	Product Name	Customer Name	IPO No.	Process Type	Action
1	17181219	2017-12-19		Research	17-18/103	Production	[Edit]
2	17111115	2017-11-15		Customer	17-18/97	Pre-OP	[Edit]
